

**Anus:** This is the opening at the end of your digestive track, it's where the poo comes out.

---

M

**Bladder:** This is where the body collects and stores urine from the kidneys before you urinate.

---

M

**Foreskin:** This is the skin that covers the top of the penis. If it is removed (because it is too tight, or as they do in some religions) this is called circumcision.

---

M

**Penis:** This is the male sexual organ. It is used to urinate and to ejaculate semen.

---

M

**Prostate Gland:** This is a small gland that sits just below the man's bladder. It makes most of the fluid that is in semen (what comes out when the man ejaculates)

---

M

**Scrotum:** this is the sack of skin that holds the testicles.

---

M

**Seminal Vesicle:** These glands make some fluid that is in semen.

---

M

**Sperm tube:** It is a long tube that the sperm swim through, it also helps by giving the sperm the DNA that it needs to survive.

---

M

**Testicles:** These are the male reproductive organs that produce sperm.

---

M

**Urethra:** This is the tube that connects your bladder to your penis so that you can urinate. It also carries sperm when the man ejaculates.

---

M

**Anus:** This is the opening at the end of your digestive track, it's where the poo comes out.

F

**Bladder:** This is where the body collects and stores urine from the kidneys before you urinate.

F

**Cervix:** The cervix is the lower part of the uterus, it is usually 2 to 3 cm long and shaped like a cylinder, this changes during pregnancy.

F

**Clitoris:** This is the female sex organ. It is important for a woman's pleasure when having sex.

F

**Fallopian Tube:** Two tubes that the eggs travel along from the ovaries to the uterus.

F

**Labia:** These are folds of skin, part of the vulva.

Ovary: This is where the egg's cells are made, they travel to the uterus and can be fertilised by sperm.

F

Pubic bone: This is part of the pelvis.

F

Rectum: This is the end of the digestive tract, its where poo is stored just before having a poo.

F

Spine: This the backbone.

F

Urethra: This is the tube that carries the pee from the bladder.

F

Uterus (can be called Womb): This is where the foetus grows and develops during pregnancy.

F

Vagina: Part of a woman's genitals, it goes from the vulva to the cervix.

F

Vulva: This is the external female sex organ, the part you can see.
