Title: My body Part 4: Personal hygiene

Level: SECOND

Links to Curriculum for Excellence

Experiences and outcomes	Benchmarks
I recognise that how my body changes can affect how I feel about myself and how I may behave. HWB 2-47a I can describe the physical and emotional changes during puberty, understand why they are taking place and the importance of personal hygiene. HWB 2-48a	 Uses correct terminology for all private body parts and reproductive organs, for example, breasts, clitoris. Describes the physical and emotional changes during puberty including erections, wet dreams, pubic hair, masturbation, menstruation, hormones, mood swings. Identifies strategies to manage emotions, for example, relaxation techniques, speaking to someone, taking time out. Describes ways of keeping hygienic during puberty.

The learning intentions and success criteria are met with delivery of all parts of this topic.

Learning intentions

- Children learn the correct names for parts of their body, including male and female genitalia, and their functions.
- Children recognise that body changes with puberty impact on feelings and behaviour.
- Children learn strategies to manage emotions.
- Children understand the importance of personal hygiene.

Success criteria

- I can name parts of my body.
- I can talk about the different parts of my body and what they do.
- I can describe the changes that take place with puberty.
- I can talk about my growing independence.
- I can talk about things I can do when I am upset and can identify an adult to speak to if I am upset.
- I understand how to maintain personal hygiene.

Resources to support this activity.

- PowerPoint slides
- 3 Large pieces of paper + post-its.
- Puberty, Body Odour and other changes for boys (from amaze.org duration 2 minutes 33): <u>https://youtu.be/4SRXvGHKA-k</u>

Whenever you use content on a platform like YouTube, please cue the film you intend to play in advance, check it is the film you want to view, and skip adverts.

Activity

- 1. Take some time to review the previous learning in this block remind the children that they have been thinking about the names for parts of their bodies, about how their body will change with puberty and also about how feelings can be very strong during puberty.
- 2. Explain that today is about the important issue of personal hygiene, something that matters throughout life, but will need more attention as children's bodies change through puberty. Share the term **Personal Hygiene** and definition on the smartboard:

Personal hygiene is about keeping yourself clean.

- 3. Ask the children to think with a shoulder partner about the questions posed on the slide: **What parts of our body need to keep clean?** and some ideas about **How do we keep ourselves clean?** In feedback and conversation establish whether things they do are *daily habits*, or as just when they become necessary. Also, clarify and acknowledge which of their hygiene activities or routines are helped by a grown up or sibling: *Does anyone help with....?*
- 4. Explain that there are a few slides that talk about some of the new challenges children can face when trying to keep clean during puberty. These challenges are to do with hair, skin and body smells. These will have likely come up in discussion, but in terms of key things, one slide at a time, check understanding or for questions:
 - **Oily hair**: Each strand of hair has its own oil gland that keeps the hair shiny and waterproof. During puberty, when the glands produce extra oil, it can make your hair look too shiny, oily, and greasy. Washing your hair regularly can help control oily hair.
 - **Spots**: This can be called **acne** or pimples. You get spots with puberty because your skin gets oily. You can get spots on your face, chest, back and bottom. You need to keep your skin clean. Try not to squeeze your spots, they will get dirty and infected.
 - Sweat and body odour: When puberty begins you will sweat more. Your sweat glands produce a new body odour with a stronger smell. Sweat can cause our body or clothes to smell bad. This is called body odour (or B.O.)
 - You will notice sweat and new smells under your arms and maybe your feet and genitals. If you keep your body and your clothes clean, then bacteria is less likely to grow. Try to wash regularly.
 - Watch the animation Puberty, Body Odour <u>https://youtu.be/4SRXvGHKA-k</u> (2 minutes 33) although titled 'for boys' it's for everyone!
 - **Oral hygiene**: Puberty doesn't make a different to your oral hygiene so just keep brushing your teeth.
- 5. Our personal hygiene team task: Ask the children to work in 3s for this task. Give them all a number of post-its. Explain that things can appear on more than one sheet. Explain that the children are to think about their personal hygiene and on individual post-its think of things to do daily, things to do regularly or things they need support for. Give an example of each if it helps. I brush my teeth every morning and at night. I put my pyjamas in the washing machine when they need to be cleaned. My gran helps me wash my hair. They can stick post-its up as they go. Have 3 posters around the room/on the floor in the circle, with these titles:

Personal Hygiene: *Things I need to do every day* Personal Hygiene: *Things I do regularly* Personal Hygiene: *Things I might need help with*

- 6. Get back together and review what's on the posters. Acknowledge what's common, what's not and in particular what they might need help with and from whom (acknowledging again that children will have different views and experiences).
- 7. **Top Tips!** Review the work you have done together and ask a final question in 3s then feedback: **So, if you were to give your top tip to other children and young people about personal hygiene, what would it be?** Make a note of top tips on the smart-board.
- 8. **An advert for kids**: Having thought of their 'top tip' ask the children to work in their 3 to make a short 'advert' or presentation that promotes their top tip. Make an impromptu TV screen they can present behind. They can make it funny or serious, presenting them in this session or through the week.

Further learning activities are available that connect to this RSHP curriculum content.

Names of parts of the body and their functions My body is changing (including menstruation) Feelings and puberty

Practitioner Notes
